

RV ENTHUSIAST GETTING YOUR RV IN TIP-TOP SHAPE

Here is a simple CHECKLIST to help you prepare your RV for your upcoming adventures

CHECK WHEN YOU'VE COMPLETED THE TASK: ✓

1. Open all doors and compartments and check for rodent intrusion and water damage.
2. Replace any dry cell batteries you may have removed for winter storage.
3. Test the operation of the carbon monoxide detector, the LP gas leak detector and the smoke detector.
4. Check the fire extinguisher and make sure it is fully charged.
5. Open the awning to let it dry.
6. Raise the radio / TV antenna.
7. Lubricate all hinges and locks with spray lubricant.
8. Test the operation of the hydraulic jacks (if applicable). Also check the hydraulic fluid level.
9. Place mothballs near (not in) the gas burner assembly of the refrigerator (to prevent spiders from nesting and causing gas flow blockages at the burner).
10. Place sheets of Bounce or Fleecy (or similar product) under each mattress and cushion. This will keep field mice away as they don't like the smell.
11. Inspect the tires for signs of dry rot. Inflate all tires to the recommended tire pressure.

Don't Forget to Check, Inspect, Test AND Run your:

- ✓ Propane
 - ✓ Furnace
 - ✓ Refrigerator
 - ✓ Air Conditioner
 - ✓ Electrical System
 - ✓ Wastewater System
 - ✓ RV Battery System
